dimensions variable

project description

Healed is a real-time object montage that merges the video of a sculpture from Herbert F. Johnson Museum of Art collection (*Bust of a boy*, Roman, ca AD 140), with the video of a 3D printed nose scanned from a living boy. As a site-specific installation situated between the ancient and contemporary wings of the museum's gallery spaces, it is a meditation on the precarity of objects in an age of distributed media networks.

This sensitive example of Roman portraiture is characteristic of sculpture produced during the reigns of the so-called Antonine emperors, Antoninus Pius, Marcus Aurelius, Lucius Verus, and Commodus, which covered the span from AD 138–193. The sculptor brings us a little boy just leaving toddlerhood, his baby fat and tousled curls giving way to an upright bearing, firmly set mouth and...

What Is Left Is Felt, 2017

rope, hardware, objects
dimensions variable

What Is Left Is Felt investigates our contemporary attachment to the things---whether purchased, made or displayed. In a world with endless opportunity to consume and accumulate objects, leading to the many challenges society faces with landfills and oceans choked with plastic debris, this installation asks us to consider the moral dimension of consumption, collection and nostalgia.

The objects hanging in the space were acquired anonymously through a series of collection boxes distributed across Cornell University campus in student dormitories and halls, where an (red) object could be donated, tagged and categorized.

Distributed Nuclear Family System (DNFS), 2010

(3) distributed wireless web cameras, sculptures, LCD monitor

Distributed Nuclear Family System (DNFS) is a real-time media montage of live video feeds from wireless web cameras distributed around the museum. Cameras installed in galleries are positioned to transmit views of works in the museum's permanent collection that together form a super-human body.

The figure, subject to changes in the gallery light, presence of visitors and time of day, is a study in phenomenal form and suggests a fragile, contingent relation of parts to the whole, subject to object.

A large-scale digital kiosk is the central focus, displaying a blue-tinted video stream of a man's face. The man has dark hair and is wearing a patterned shirt. The kiosk is part of an interactive sculpture. The background is dark, with some structural elements and lights visible on the right side.

Crowd Sourced Condo, 2010

(6) PCs, web video stream, scaffolding, MDF, headsets, speakers

dimensions variable

Crowd Sourced Condo is an interactive, networked sculpture that fuses real space and information space in a large-scale kiosk that inverts the call center structure between India and the United States. Shaped by the remotely collected images of call center workers in Delhi and the artifacts left by participants in Ithaca, the sculpture's main interface is a physical, six-sided kiosk reminiscent of call center work stations that form the physical space of the information economy.

Words Between Worlds, 2012

MDF boards, video loop, projector

Words Between Worlds uses reCAPTCHA verification process as a form of automatic poetry. Words used in the process called "human computation" are drawn from the Google Book Project are deceptively presented as random words. The installation projects a loop of archived words pairs from the reCAPTCHA application, splitting them with two surfaces to emphasize that one is always a random word and one a unresolved image from a printed book being scanned by Google.

Grass Flows, 2009

Google Earth application for web

***Grassflows** is a web application that uses the Google Earth to revisit Hans Haacke's 1969 Earth Art work, Grass Grows. The project creates a dynamic grass mound out of the earth by visualizing participating user locations around the world. Visiting the project web site automatically converts the user's IP to its corresponding geo-location on the Earth causing a blade of grass to sprout at that location.*

***Liquid Eden: Discreet
Paradise of Networks,***
2006

wood panels, java applet, web site, (2)
projectors

Liquid Eden: The Discreet Paradise of Networks is a multi-media installation that explored the threshold between analog and digital form. Large projected images of lilies forms a real-time interface between remote users and viewers in the gallery space, where the images disintegrate by means of the participation of remote users whose presence is experienced as the animated disintegration of the pixels making up the lily image.

OBJECT
EMPATHIES

Object/Object Empathies, 2016

The 2016 CCA Biennial *Object/Object Empathies* focused on the cultural production of empathy and the ways in which feeling *is* form. It explored how the objects, buildings, clothing, machines, languages, and images we construct are shaped by our intentional or implicit emotional, interdependent relationship to others.

Intimate Cosmologies: The Aesthetics of Scale in an Age of Nanotechnology, 2014

A platform for raising the visibility of the arts at Cornell, this inaugural campus-wide biennial explores how radical shifts in scale have become commonplace in contemporary life and how artists address realms of human experience lying beyond immediate sensory perception.

Collaboration on Campus— Nanotechnology & Contemporary Art Kimsooja

Specials

November 10, 2015

In this Art21-produced special feature, artist Kimsooja collaborates with scientists and nanotechnologists to create an iridescent steel and polymer sculpture for the Cornell University campus in Ithaca, NY. Developed in collaboration with architect Jaeho Chong and Cornell nano material engineer Ulrich Wiesner, Ph. D., the 46-foot-tall needle-shaped structure *A Needle Woman: Galaxy was a Memory, Earth is a Souvenir* (2014) is the result of the artist's first-ever collaboration with scientists.
